

“Let their product breathe”

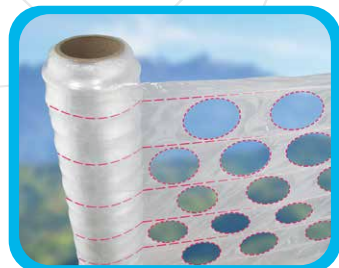

with AIRMAX™ Ventilated & Reinforced Stretch Film

Rainbow Park Nurseries move to aerated film for the transport of indoor and outdoor plants

Andrew Tayler, General Manager for Rainbow Park Nurseries was pleased to find the RLB Packaging stand at the 2018 Foodtech Packtech exhibition. Not only was Andrew looking for ways to improve production but also for a way to aerate top quality indoor plants, perennials and ornamental plants for transport from their modern nursery in Ramarama to their customers throughout New Zealand.

Andrew having close connections with the European plant nurseries, had seen how they would wrap plant trolleys for transport in Holland, by machine and also using a ventilated film to allow the plants to remain in the best possible condition from grower to market. Rainbow Park Nurseries were having to stretch wrap approximately 100 plant trolleys per day by hand, which was time consuming and inefficient.

RLB Packaging's solution was an Italian designed semi-automatic pallet wrapping machine with integrated ramp and modified turntable platform to lock in the plant trolleys whilst wrapping with RLB's newly launched AIRMAX™ ventilated and reinforced stretch film. AIRMAX™ film offers maximum aeration to improve plant condition and has excellent load stabilisation keeping the plants secure and stable whilst being transported.

Not only has the trolley presentation and care for the plants improved but the wrapping by an automated machine in conjunction with AIRMAX™ ventilated machine film has meant improved productivity savings when handling in excess of 100 plant trolleys each day.

If you would like to learn more about how AIRMAX™ ventilated and reinforced stretch film can benefit your business please get in contact with RLB Packaging today.
